Profile

An impact-oriented software developer with a strong focus on building scalable, user-centric applications that solve real-world problems. Experienced in modern frontend technologies including Angular, React, and Next.js, with a solid understanding of software design principles and deployment workflows. Am known for being curious and having an adaptable mindset, thriving in fast-paced environments and contributing effectively within cross-functional teams. Strongly committed to continuous learning and delivering high-quality solutions.

My Tech Stack

PHP ,nest js, node js sql ,postgresql ,React js, Next js, Angular , Firebase, Supabase, Git, TypeScript, JavaScript and GitHub Actions

Professional Experience

frontend developer 02/2024 – 05/2024

APPLABKE

- Built a responsive website to strengthen practical frontend engineering skills and contribute to a collaborative team objectives.
- Contributed to CI/CD workflows by testing deployments and helping maintain build pipelines.
- Worked under the guidance of a mentor to improve problem-solving skills, technical communication, and teamwork in a professional environment

frontend developer 08/2024 – 09/2025

RecessEdtech

- Built and maintained multiple production-grade applications, including the company website, school dashboard, parent platform, and teacher application.
- Supportively led the frontend and backend team in ensuring project consistency with timeous delivery of outputs and stability through performance tuning and codebase clean-up.
- Implemented CI/CD pipelines using GitHub Actions to automate builds and deployments, reducing manual overhead and deployment time.
- Promoted engineering best practices such as reusable components, folder structure, and documentation standards.
- Actively contributed to sprint planning and technical discussions to influence product direction.
- Supported team growth by reviewing code, sharing knowledge, and providing informal mentorship.

Awards

Stellar Domestic Hackathon 10/02/2026

- On 12th February I was able to attend Blockchain hackerthon a 3 day hackerthon hosted in CEMASTEIA and came in 2nd place with my team
- My team and I were able to build a simple MVP (minimum viable product) that helps domestic workers get jobs
- During the 3 day event I learned to integrate different technologies together such as USSD, Blockchain into our API

Personal projects

Medical recorder app 🔗

- Developed a full-stack medical records management system to improve how schools track, audit, and manage healthcare information for teachers and support staff.
- The application enables secure record-keeping, auditing capabilities, and clearer visibility into medical coverage for management teams.
- Built with Angular on the frontend, NestJS on the backend, and PostgreSQL as the database, the system was designed with scalability and reliability in mind.

- Automated CI/CD pipelines using GitHub Actions streamlined testing and deployment, while a token-based authentication system with access rotation enhanced security.
- Separate development and production environments ensured safe testing, stable releases, and production reliability.
